DriveMate-

VEHICLE ASSISTANCE APP WITH AI-BASED ENGINE COMPLAINT PREDICTION BY ENGINE SOUND RECOGNITION

PROJECT ZEROTH EVALUATION

Introduction

- It is an AI based Software application that can be used as a complete assistance for every person who use motor vehicles
- The main attractive feature of the DriveMate application is the ai based engine complaint prediction using the engine sounds

Problem Statement

- In the present day a complete package of on road vehicle assistance app is not readily available(which includes fuel delivery,mechanic finding,vehicle document wallet,vehicle parts purchase etc..).user have to install different apps for each needs

- A user must find a very experienced mechanic for figure out the problem with engine while he notice any change in engine sound

Existing System

- In the present day only a well experienced mechanic can find the engine problem by listening the engine note
- Its difficult to find a mechanic while your vehicle fails when you are in middle of a journey

Proposed System

- A vehicle assistance app with AI-based engine complaint prediction could use machine learning algorithms to analyze engine sounds and detect potential issues before they become serious problems
- This could involve recording and analyzing the engine sounds in real-time, and then using this data to predict potential issues based on patterns and correlations in the data.
- The app could then provide recommendations to the driver, such as scheduling a maintenance appointment or seeking repair services

Proposed System

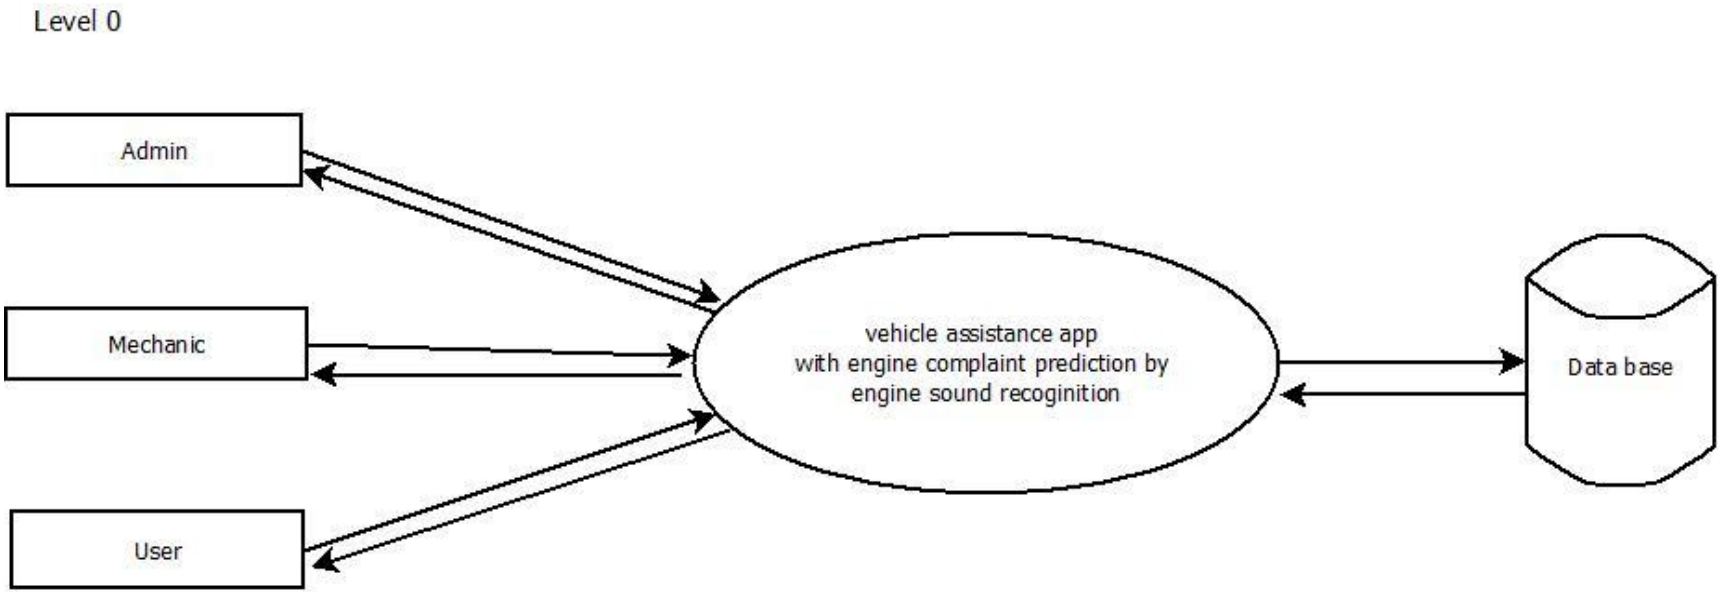

- This app also provide features like

  - ❏ Digital vehicle document wallet
  - ❏ On road fuel delivery
  - ❏ Nearby mechanic finding
